

## PRESS RELEASE

### **ONEVISION SOFTWARE WITH SECOND MAJOR SOFTWARE UPDATE FOR 2024: NEW FEATURES FOR MORE EFFICIENCY AND PERFORMANCE**

**Regensburg** – OneVision Software announces its latest software release of the year, enhancing existing functionalities while introducing innovative approaches to automate and optimize production processes in the printing industry. The update highlights improved performance, user-friendly workflows and comprehensive solutions for fully digital production processes.

#### **Update Highlights**

The latest release includes a number of enhancements and new features, such as the following:

- **Resource manager and sample assembly lines:** Integrated directly into the workflow management system, these tools provide enhanced usability and overview.
- **Optimized PDF processing:** The software now supports files larger than 10 GB (PDF levels 1.5 to 1.7) with an automatic switch to the modern cross-reference stream.
- **Increased speed and functionality:** Transparency flattening is up to three times faster, and features like page rotation and scaling have been expanded.
- **Enhancements to “Stations” and “Workspace Production”:** The solution “Stations” enables the digital integration of manual tasks such as grommets, sewing or picking. “Workspace Production” makes it easier to batch jobs based on criteria such as delivery date, format or finishing, reducing makeready times and ensuring seamless workflows.

#### **Increased efficiency through automation**

The modular structure and new features help print service providers make their production processes more efficient and sustainable, from optimizing substrate utilization to minimizing manual tasks. These capabilities also provide solutions to labor shortages.
